At Greenville Majors Field, Beacon Aviation provided accurate digital topographic survey data of the entire 200 acre infield area around primary Runway 17-35 to support our efforts in analyzing and providing solutions to minimize erosion threatening the infrastructure of the airport. Beacon provided this data at half the cost of procuring this data through conventional ground surveying technology. Their digital aerial survey data was merged with conventional survey data to increase accuracy in areas of high grass and vegetation. The fact that they are a certified DBE firm makes them a perfect partner on projects utilizing federal grant money where established DBE goals must be met.
