Premier GIS Mapping

September 01, 2018

Product Overview

Beacon Aviation, Inc. (BAI) is prepared to capture and deliver high resolution, accurate, aerial imagery in a digital Ortho Mosaic format for any water district. The implementation of BAI's aerial intel, with the easy to use Global Mapper GIS software, will empower each district with the ability to manage in ways never before thought possible.

Take control

If you can see it you can map it. The key component to the BAI mapping solution is it's high resolution, accurate imagery coupled with easy to use yet powerful GIS software. This approach allows you to create, manage, and organize all internal and external data (meter locations,

lines, flush valves, engineering drawings/maps, CCN boundaries, political boundaries, parcel boundaries, state and local highways, etc.). All of this can be accomplished from the convenience of the office. *BAI also provides 5 hrs of training/support with each purchase.*

Go Mobile

Global Mapper Mobile is a powerful GIS data viewing and field data collection application for all your smart devices. GM Mobile utilizes the device's GPS capability to provide situational awareness and BAI imagery for precise location intelligence for water meters, lines, flush valves, and more.

No Internet, No Subscription Fees

All data will be stored locally on your Mobile Devices and a PC. Accessing your data locally provides greater speed, stability, and security. It also allows those out in the field to work without the hassle of keeping or needing a cellular connection. There are no monthly or annual fees included with the purchase of the BAI mapping solution.

Price

Beacon Aviation, Inc. Offers TRWA members a 5% discount which brings the rate down to \$0.285/acre (includes a custom flight, Global Mapper GIS software, and 5 hours of support and data integration). If you would like a quote for your water district, please do not hesitate to reach out to us via <https://www.BeaconAviationInc.com/contact> or call direct at (903) 768-2001.

Testimonials

Beacon Aviation, Inc. is excited to be a part of TRWA's GIS Mapping solution and fully affirms aerial mapping to be an essential step forward for all Water Departments.
